

'Brain tap as a tool for neuromodulation'

The application of light and sound frequency has brought about fascinating results in health and disease. Coded light and sound has shown promising results in peak performance and brain related disorders including brain injury, PTSD, psychosomatic disorders, autism and many more.

The workshop will demonstrate how light and sound frequencies can help change the way the body responds to treatment and repair itself. It will be illustrated how neurophysiology changes occur with coded light and sound using simple app based software.

REGISTRATION

Please register on the AIIMS website (www.aiimsbhopal.edu.in)

Total 50 participants will be registered for the CME on first come, first serve basis.

There is **no registration fee** but prior registration is mandatory. Spot registrations will not be entertained.
Last Date of Registration is 1st December 2019.

Participants have to arrange for their own accommodation.
