PROPRIETARY CERTIFICATE

TO WHOM IT MAY CONCERN

This is to certify that Spectra Optia Apheresis System (61000) and its disposables are solely manufactured by Terumo Blood And Cell Technologies and it is proprietary in nature with the following features.

1. Custom Prime allows you to fill the tubing set with specified fluid (RBC, plasma, or albumin) after you prime the set with saline and before you connect the patient. Performing a custom prime helps to maintain isovolemia when the patient has a low RBC volume or a low total blood volume, such as a pediatric patient.
2. The AIM system is an optical detection system that is composed of hardware and software, and that interprets the interface position in the tubing set connector during procedures on the Spectra Optia system. To accurately interpret the interface position, the AIM system focuses on the optical reference on the filler, which is illuminated by the AIM system lights in the centrifuge chamber. The Spectra Optia Apheresis System is a transportable, automatic blood component separator that uses centrifugation and optical detection (Automated Interface Management system or AIM system) to perform therapeutic apheresis and cell collection procedures.
